

Mindways QCT

Bone Density Solutions for Clinical Screening
& Research applications

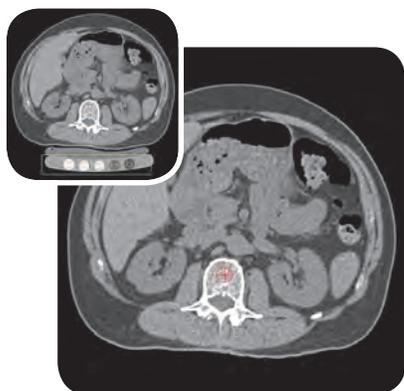

- Trabecular Spine BMD
- DXA-equivalent hip BMD
- FRAX® Compatible
- In ISCD and ACR guidelines
- NEW CliniQCT eliminates the phantom under the patient
- Quick & simple; typically a 5 minute test
- Reimbursed by Medicare and insurance

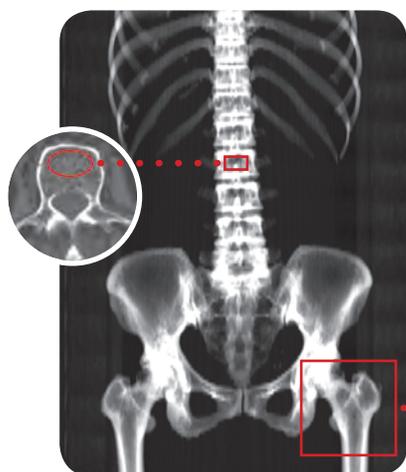

MINDWAYS CT 
quantifiably better.

3D Volumetric Spine and Hip BMD

CliniQCT

CliniQCT eliminates the phantom from the patient scan.

Incidental/dual-use QCT.

CliniQCT lets you obtain no-dose spine and/or hip BMD measurements from your routine* abdomen, pelvis, or spine CT scans.

*Non-IV contrast

Quantitative computed tomography (QCT) is one of 3 methods cited by the National Osteoporosis Foundation as safe and effective for the evaluation of bone mineral density (BMD).

CliniQCT & QCT Pro—for 3D Volumetric spine and hip QCT

QCT Pro is a system consisting of calibration phantoms and software for trabecular spine and DXA-equivalent hip BMD. QCT Pro is Windows® based for flexibility and durability and is compatible with any DICOM CT scanner. The system will survive a computer change, CT Scanner upgrade, or CT scanner maintenance such as an X-ray tube replacement.

CliniQCT - Asynchronous calibration method

Mindways introduces its next generation of QCT that eliminates the patient calibration phantom without compromising short-term precision or accuracy. CliniQCT expedites QCT BMD studies and facilitates incidental, and dual-use QCT—the capability to obtain BMD measurements from CT scans done for other indications—thereby providing an opportunity to greatly increase osteoporosis screening with no additional radiation dose to the patient.

Quick, low-, or no-dose BMD

A QCT BMD specific exam takes about 5 minutes and is very similar to an ordinary abdomen/pelvis CT scan. Low dose CT protocols and dose reduction software could be used.

Incidental or dual-use QCT eliminates the need for a dedicated CT scan for estimation of BMD and thus provides BMD results with no additional patient radiation dose.

How does QCT compare to DXA?

At the hip, QCT produces DXA-equivalent measurements compatible with FRAX®. At the spine QCT is unique in measuring exclusively trabecular bone, compared to DXA's combined measurement of cortical and trabecular structure. Measuring only trabecular bone avoids certain confounding conditions such as those associated with degenerative changes, scoliosis, extra-osseous calcifications and obesity.

Return on Investment

BMD measurement by QCT is reimbursable for the medically necessary screening of post-menopausal women every two years. Medicare and insurance reimbursements are covered by CPT code 77078. QCT Pro's acquisition and ongoing overhead costs are significantly less than DXA, leading to better return on investment and greater financial viability.

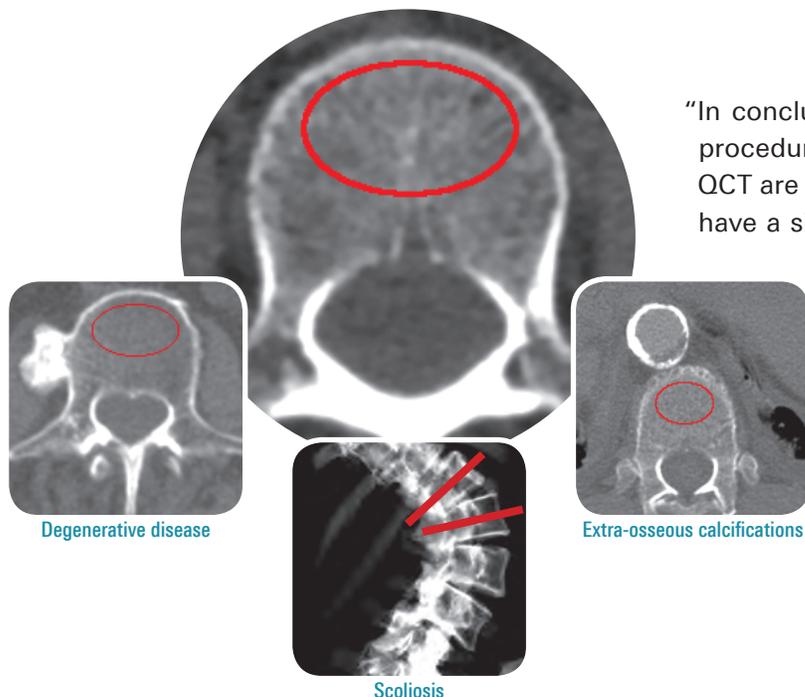

55 to 90% of osteoporosis-related fractures occur in individuals that would not be diagnosed with osteoporosis based on a DXA BMD test.

Stone, et al; 2003;
 J Bone and Mineral Research

The QCT Spine Trabecular Advantage

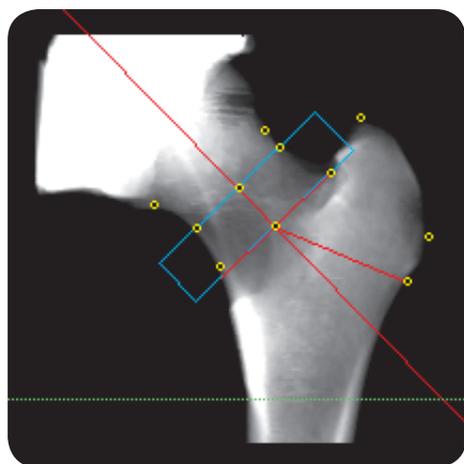

By measuring trabecular bone exclusive from cortical bone, QCT avoids conditions which can confound DXA.

"In conclusion, volumetric QCT scanning and image analysis procedures have shown that trabecular BMD measurements by QCT are not influenced by OA, and that degenerative changes have a significant effect on both cortical and integral QCT as well as on PA-DXA at lumbar spine and at the hip. OA changes therefore represent a major source of accuracy errors for DXA, usually overestimating BMD. Thus, for subjects with established OA, assessment of skeletal status by volumetric QCT may be suggested."

Guglielmi et al., Acta Radiol, 46(3): 269-275, 2005.

DXA-Equivalent Hip

Country: US (Caucasian) Name/ID: QCT Hip About the risk factors

Questionnaire:

1. Age (between 40 and 90 years) or Date of Birth
 Age: 74 Y: 1940 M: 11 D: 05
 2. Sex: Male Female
 3. Weight (kg): 62
 4. Height (cm): 162
 5. Previous Fracture: No Yes
 6. Parent Fractured Hip: No Yes
 7. Current Smoking: No Yes
 8. Glucocorticoids: No Yes
 9. Rheumatoid arthritis: No Yes
 10. Secondary osteoporosis: No Yes
 11. Alcohol 3 or more units/day: No Yes
 12. Femoral neck BMD (g/cm³):
 Mendosys QCT: 0.45 T-score: -2.9
 Clear Calculate

BMD: 0.98
 The ten year probability of fracture (%)
 with BMD:
 Major osteoporotic: 42
 Hip Fracture: 30
